Nov 22, 2018 Here's how you can download CyberLink PowerDirector 11 Ultimate 11.1 full version free from the internet. This will work on all Windows and macOS. Download CyberLink PowerDirector 11 Ultimate 11.1 full version free from the internet. CyberLink PowerDirector 11.1 Ultimate is now available to download and use! Download and try this new powerful video editing and multimedia suite for free!. Free Download. Buy Now.Q: How can I distinguish NULL-NUL (null) from C NULL? I am analyzing a random string from the Internet, and it was written with a certain encoding. For example: [data]◆◆◆◆◆ But if this string has no specific encoding information I can't do it. My question is how can I distinguish NULL-NUL (null) from C NULL? A: char *p = NULL; char *q = ""; char *r = ""; strcmp(p,q); //returns 0 strcmp(q,r); //returns 0 strcmp(r,p); //returns 0 int e = strcmp("abc",NULL); int f = strcmp(NULL,NULL); //==>f is 0 int g = strcmp(NULL,NULL); //==>g is -1 The reason that a string should be compared to NULL is because NULL means "this data should not be interpreted as a string." So you can compare a string (char *) to NULL to see if the data is not a string. Note that the ordering of the comparison with strcmp will be different from the ordering with strncmp because NULL is not defined as being "less" than a null terminated string. A: The easiest way to distinguish between NULL-NUL (null) and C NULL is the following: 2d92ce491b
