by S Sugsaikon 2020 Cited by 4 The energy consumption data is collected from the third-party data provider, for the purposes of analysis, model building, and planning . by JK Andrianasolo 2020 Cited by 3 The proposed framework allows for the real-time power and utility management by integrating the forecasting, dispatch, and load reduction techniques . by PY Tan 2019 Cited by 5 The technological differences between traditional and integrated gas metering are analyzed and a comparative analysis between two technologies. The electricity use information . by S Sadsadno 2019 Cited by 1 In order to reduce the carbon emission, the gas meter is used for energy and utility management purposes such as billing and metering . by V Saetee 2019 Cited by 1 The impact of the total

gas volume supplied to the house by way of leak or flowmeters is assessed . The measurement of gas flow is an indicator of the. by L Sorn 2019 Cited by 5 The proposed RMC is a non-intrusive energy management system . The energy data is collected by the local power grid . by JX Wang 2019 Cited by 1 A data logging device, called GAS-PER, is implemented for home gas monitoring and utility billing . The energy data is collected by the. by JX Wang 2019 Cited by 1 A method is proposed to reduce the computational cost of the power load prediction by transforming the real-time electricity data collected from the residential. by Y Wang 2020 Cited by 3 The energy data was collected from six households by using the gas electricity meter . A novel system for controlling appliances and homes

with the. by YX Li 2020 Cited by 3 A real-time electricity price management system called R-SMS was implemented to reduce electricity bills . The system generates an SMS. by X Wang 2020 Cited by 4 A real-time monitoring system called SMART RULES is developed to reduce the electricity bills . It was developed by deploying different technologies, which mainly consists of . by M Chen 2020 Cited by 2 As an initial attempt, a more effective, cost-efficient and sustainable method for monitoring and managing electricity consumption in homes has been

CRACK Management Software For Printing Electricity Bill - EMAN - 2017. Management software for printing electricity bill - EMAN - 2017. by A Yoshida 2020 Cited by 3 Listed are six major

groups of benefits and advantages that the information and communication technology (ICT)-based smart grid will bring to the smart home . by S Sugasaki 2021 Cited by 5 The flow of an electric current is usually considered as a continuous process. However, power electronics are discrete in nature and can. by P Nillaor 2022 Cited by 1 The research study investigated the perceptions of HVAC system management using the perception and. by S Sugasaki 2021 Cited by 1 With the digitalization of technologies, infrastructures, and societies, problems which have been. by P Nillaor 2022 Cited by 1

Abstract: Intelligent energy management systems aim to optimise energy efficiency by optimising the energy mix. This requires a better understanding of energy flows as well as an efficient communication

between the energy consumer and the. by P Nillaor 2021 Cited by 3 While an online computer program can be easy to use, use of the program can be dangerous to. by K Ohnuma 2020 Cited by 2 The methods and systems used to classify power stations using. by K Ohnuma 2020 Cited by 3 The table contains the results of the questionnaire survey about the monitoring. by YJ Hwang 2020 Cited by 5 There are at least three options for measuring (or defining) the performance of an algorithm: through its accuracy, through its running time, and through. by M Tohdji 2020 Cited by 4 Cited by 3 Finally, a recommendation is proposed on how to decrease the load factor in practice to. by S Sugasaku 2020 Cited by 3 The application of the proposed scheme in IEEE 5681. by P. Phansuwat 2020 Cited by 3 In

order to implement the proposed scheme, five steps.
by P. Phansuwat 2020 Cited by 3 By adopting the
proposed scheme, the N-1 type filter can. by P.
Phansuwat 2020 Cited by 3 2d92ce491b
