Beauty is in the eye of the beholder, but many of us have experienced some form of eye cancer. And with the advancements in eye surgery, treating eye cancer is now easier than ever. So, who's to say that your beloved eye can't be saved? Of course, it is a big step to deal with eye cancer. But, if you have good insurance, it's a lot less frightening. There are a number of eye doctors that do free examinations to help determine the extent of the cancer and to discuss treatment options. Your optometrist, ophthalmologist or cornea specialist can help you find a treatment that is right for you. Treatment options may include eye surgery, chemotherapy, radiation or a combination of treatments. The first step is to go see an eye doctor for an examination. The optometrist or ophthalmologist will examine your eyes with a small lighted telescope and will check your vision, eye health and may perform an eye test to make sure your eyes are healthy and functioning properly. The ophthalmologist will also check the inside of your eyes with a small tool. Once your eyes have been examined, your eye doctor will make recommendations for any treatment you may need. If your eyes have been damaged by cancer, treatment for the eye will likely involve both surgery and chemotherapy or radiation. In general, surgery is more of a challenge because of the delicate eye tissue. Chemotherapy and radiation treatments are similar because they are non-invasive. For example, both treatments usually involve short-term use of a drug to kill the cancer cells. As a result, it may take months to determine the effectiveness of the treatment and how the cancer is progressing. To make sure you and your loved ones have a normal life, it is important to treat your cancer as soon as you are diagnosed with cancer. It's easy to become overwhelmed and believe you will never see again, and some people tend to do just that. They delay treatment until they are in severe pain or experience blindness. However, this is not a good choice to make because the effects are often irreversible. So, once you are diagnosed with cancer
