Database - by using the database features of Autodesk Architectural Desktop (ADT), a BIM Database is created. This database is independent of any CAD application. There are three types of databases that can be created: \* Generic database \* Building database \* Geospatial database History - Autodesk has stated that Autodesk Model Derivative Architecture (MDA) is a real time CAD solution. Autodesk has released a toolkit for Java called Autodesk Architecture Design Toolkit (ADTK) that integrates 3D architectural design, construction management and real time CAD components. J-cue is a universal and cloud-based CAD workflow system for the building industry and used by major global construction and manufacturing firms including Balfour Beatty, BAM Nuttall, Bechtel, Balfour Beatty, Atkins, CBM, Constructech, EPR, Hines, HOK, CMM, AMEC, DOOR, EY and the U.S. Green Building Council. J-cue is a cloud-based design and construction solution that uses a web-based user interface for creating construction documents. J-cue is designed for the building industry as an industry standard CAD tool for architectural, structural, mechanical, electrical and plumbing design. J-cue reduces the cost of CAD construction by allowing its users to edit CAD models in the cloud. These documents can then be printed, stored, emailed and shared with other users. J-cue provides real-time collaboration, a single source of truth for documents and communication with cloud-based technologies. J-cue enables collaboration through project streams and the ability to see changes in real-time. J-cue provides a web-based user interface (UI) that can be used by architects, engineers, contractors, material suppliers and others. In 2016, J-cue received the Computerworld Excellence in Architecture award for its technology, cloud-based collaboration. In-CAD is an augmented reality (AR) technology from Autodesk that allows users to interact with a digital representation of the real world. This makes it possible to bring a physical real-world object to life, or create new 3D models using real-world information. Additional Python extension modules that were developed for Python can also be imported in AutoCAD, such as the following ones: \* Autodesk Python \* Autodesk Converter \* Autodesk Viewer \* Autodesk a1d647c40b

Add custom Web annotations to your drawings. Insert the URL for a Web page, such as a vendor's Web site, and watch your drawing appear on the screen in real time. (video: 0:53 min.) Collapse objects using Layers for easy navigation. With the Collapse Layers command, you can save time and space on your drawings. Add a new layer to your drawing, and then collapse any selected objects to the new layer. Improvements to the default Ribbon commands Edit the Ribbon to quickly access commands based on the scenario you are working in. With a single click, you can perform common actions on paper, such as rotating or scaling, as well as the digital equivalent. Insert a layer in a drawing, making it the first layer of the current drawing. If you insert a new drawing or migrate from a previous version of AutoCAD, you'll be able to use the Edit mode commands for this drawing. Add a new drawing and open it automatically from a shared template. When you import your designs from a shared template, you'll be able to use the command to open the template and add content to the drawing. More than 20 new digital media commands Get started creating a realistic visual effect for your designs quickly. Get exact color matches for paint, paper, and plastics and export to the HTML format for Web pages.
